Define devolution ap human geography. Devolution definition ap human geography.

After World War II as a member of the non-aligned movement. It was a communist state, but it was not aligned with the Soviets. After Tito died in 1980, there were also divisions between the religious (Christian and Islamic). All these tensions led to the entry of Tito's left by Tito opened the door for violence. In 1987, Slobodan Milošević took control of power and governed almost a day of the ethnic violence that left thousands of dead. In 1997 the Yugoslav region officially entered several new states, including Bosnia and Herzegovina, Croatia, Kosovo, Montenegro, Serbia and Slovenia. It is a "old" state that has been serious about facing its past, but it has shown that those conflicts can also cause civil unrest, protests and even conflict. These changes have occurred in history and the terrain (also called states) could deal with the numbers left by the past generations. As the nimpars change, the policy geographic becomes able to discuss returning, we need to understand the concepts of polytic geographic, which implies states, territories and numbers, which are interrelated and vital for the study of the AP® human geographic. More important for you as a citizen of the planet Earth, understanding the political geographic helps you make sense of the headlines that report territorial conflicts and disputes daily. What makes a state? Our planet is divided into policy units called Paises or States. Remember, in this context, A State refers to a Paises and not to a subdivision of the United States. Each Paises has defined borders, which have established numbers. A birth is a group of unified people with a common culture. The Kurds would be an example of a birth without its own state. The concept of birth is important to notice when we talk about forces that fragment a State. National States describe a state composed of a population with more than 90% of a particular culture. Japanese and Lesotho are good examples of national states. Territories and borders are important ways of defining space and have been the cause of conflicts throughout the years. The boundaries are thin and invisible markers that can be cultural, or both. Because physical boundaries are sometimes barriers to travel like mountains or water, they are often state borders, boundaries usually closely follow ethnicity and can separate two or more cultural groups. If you look at many modern day boundaries, you will see they are geometric, drawn up by Europeans during the colonial period, with no regard to ethnic division. Disputes often arise over boundaries when countries disagree over the superimposed boundaries that split ethnic groups. This type of dispute is still evident today in the Horn of Africa. Somalia is in dispute with Ethiopia over the rights of Somalis living in the contested border between the two states. How did the Contemporary Political Structure Evolve? The notion of the modern state developed in Europe in the early eighteenth century. The theory that the political state was a "living organism" was used by Germany to expand and occupy its neighbors during World War II. This global expansion took the form of imperialism and colonialism. Europeans used military force, cultural domination, and formal control from the "other country" to monitor their
