One of the easiest ways to change your Android experience is to replace the stock launcher with a new one. The word "launcher" is Android lingo meaning "home screen app" and it's a common term because it's so easy to switch to a new one. So if you're looking to update your home screen, this guide is for you. The benefit of using a custom launcher is that you are in control of your experience, giving you plenty of options to try different ones and find what suits you. If you're looking for one that offers all the customization you need, there's plenty to fill that gap without asking. Of course, if you're looking for something cleaner and simpler, this is what you need too. Before using a custom launcher, you should search the Play Store to find several different candidates that match your personal style or needs. Corresponding list with many popular home apps to start with. Nova Launcher, Action Launcher, and CPL are three of our favorites if you're looking for a place to start. Since you want to change your home screen, you'll probably want to download a lot of different launchers, but for the sake of simplicity we'll limit them for now. Download some home apps (maybe 2 or 3) then you can exit Play Store and move on to the next step. You can always repeat the process and check back later. As with all Android devices, there are many ways to do the same, and Home Launcher Swap is no different. The two methods listed below are very easy to use. It all depends on which method works best for you or what you want to achieve. Almost all phones now allow you to search in the system settings. So, open the Settings app from the app drawer, then tap the search box or icon at the top of the screen. Here, type "Default Apps" or simply "Default" and then click on the "Default Apps" entry. If you're using a Pixel phone, you should have the "Default Home App" setting in your search results for even faster access. The default apps home page appears and you can see all the default apps your phone uses for each activity. Clicking on Home App will list all launcher apps currently installed on your device. Touch the app you want to use, it will become your new default launcher. Then he should send you home immediately. One of the easiest ways to change the Android environment is to replace the default trigger with a new one. The word "launcher" is Android Linda for "home screen app" and it's a normal term because it's easy to switch to a new one. So if you want to restore your home screen, this guide is for you. It's nice to use an impossible startup that you have control over your experience, so you have many opportunities to try something else and find your match. If you're looking for someone who has all the fixes you'll ever want, there are many things that fill that void without asking. In fact, we think the way the S7 causes the camera to double-click the home button is really useful. So, if you have an old Galaxy device, you can use the Mapper buttons to double-click the camera shortcut instead of SP. Best Rom Android Best Android Happy Pustanzing! What other major changes did you make in your galaxy? Tell us three of our favorites if you're looking for a starting point. Since you want to change your home screen experience, you probably want to download a lot of different launchers, but we'll keep the number low for simplicity. Download a few home drawing apps (maybe 2 or 3) and then you can leave the Play Store and move on to the next step. You can always repeat the process and check the next one later. As with all things Android, there are many ways to do the same thing, and changing the home trigger is no different. Both methods below are very easy to follow, depending on what suits you best or what you are trying to achieve. Almost all phones now allow you to search in the system settings. So open the app settings and then tap the search box or icon at the top of the screen. Type "default app" here, or just "default" and then click Default Apps. If you're using a Pixel smartphone, you should have a "default home app" for even faster search results. The "default apps" home page is displayed where you can see all the apps your phone uses for each default activity. Click "Home App" to view all apps currently installed on your device. Click on the app you want to use, it will be a fresh start. Then it should be sent home immediately New startup device. If you ever want to come back, just repeat these steps, but select the default starch in the menu above. You can also remove all optional launches to return to the default main screen. Not everyone likes the intended actions attributed to specific keys or key combinations, and one of the most common complaints is the Home button on old Samsung Galaxy devices. It is possible to make sure that the "main" button does what you want, not what the manufacturer has decided using another bypass solution. How to customize Android Top on Android launching units Samsung and many other manufacturers do not leave the main button as more and more screens are using the front panel in front of the smartphone. The elegant Samsung Galaxy S8 was the first Korean company flagship to give it up, and now the Low Class A Series devices followed the example. However, the physical main computer button always has its fans, and we will show you how to use all its capabilities. For demonstration purposes, we use the Samsung Galaxy S7, which operates Android Nougat, although it should operate on most phones with a physical home button. By default, press the S7 Main Page button twice to open the camera link, but for this lesson we would like to run the Play store. On the older Galaxy devices, you will get to the main screen at one physical basic button, twice pressing, which will run, which will run and press for a long click for a long time. First of all, you need a special app from the Google Play Store. So download and install them to your device. There are several programs that provide the same features, but in this example we use key rendering keys: remodeling keys. Key rendering: Key rendering, how to change the main key function when the key rendering is operating. First you will be asked to authorize the program in the settings. Key mapper can see which program this is on the screen. While this is not uncommon for use with these features, it should be warned. We recommend that you test their legitimacy with this application developer. After authorization, we can reprogram the home and volume physical buttons of various events (other options require a paid version). In this example, we will adjust what happens when the twins turn. First, select the Home button to display the Adaptation menu. Select a double tap. Even with the free version, life can be changed. / © NextPit Next, select whether you want to double-click the action, applications or shortcuts. In this example, we selected applications. We will also see a list of applications. Select Play and Voila Store! Double-spawning buttons are now open to Google apps and gaming market. If you ever want to return to your previous position, you can clean the application preferences. In fact, we think the way the S7 causes the camera to double-click the home button is really useful. So, if you have an old Galaxy device, you can use the Mapper buttons to double-click the camera shortcut instead of SP. Best Rom Android Best Android Happy Pustanzing! What other major changes did you make in your galaxy? Tell us about it in the comments. If the app is not open, your home screen will appear. By default, the date, weather conditions and some applications are displayed on the main start screen.
