New 4G Device cashback

Buy a new phone & get upto Rs 2000 cashback

[Bleep] [Bleep method described above does not work with new firmware models such as 21.333.64.01.284. If the firmware version is 21.318.09.00.284 or less, it will work. Versions above this do not work. There is a different method for that.

So I have previously written a review on the AIRTEL 4G HOTSPOT E5573CS-609 MODEL, you can check here. At the end of the post I said that this device can only be unlocked using a start-up method. This is because we need to change the internal firmware to a generic Huawei firmwa the same, but they will not provide the complete solution until you pay them a small amount of Rs500/- I invented to find this solution with a little help from those blogs and research on my own. If you feel this post has helped you, please like it and re-blog so that others can benefit from it. If you want to share this on any of your blogs please add a link to this page. I'm providing the eitire solution below, for everyone and I don't want money, however, if you need me to do this for you, then I'll charge oc. Also, if you want to donate to me, if you had to change the firmware, you had to change the firmware. models based on the IMEI number as the algorithm used was either Algo V1, Algo V2 or Algo V3. However, the last model, E5573Cs, uses the Algo V4, which requires a code, calledCode. This code at all. So, to change the firmware, we have to completely remove this code. This DataLock DataLock It is stored on a space called NVRAM (non-Volatile RAM), along with other data such as device serial number, IMEI IMEI Number, SSID default Wi-Fi, Wi-Fi default password. So, using this method, it will also delete all these other data. In the post I will also delete all these other data. In the post I will also delete all these other data. its waranty and cannot be restored easily. So, I won't be held responsible for any damage. Please proceed at your own risk. Now you will need the following software list, so please download link: Id=0b6drvgxtjeazevvehfanfx 4Shared: All the software below are available in a single ZIP file (free-hex-editor-neo huawei-hilink-driver / Driver wo) Method: please proceed at your own risk!!!! Please use only one Windows 8, 8.1 and 10 will give you problems with drivers. Step 1: Start the device long press the button in the center and both LED lights for the network and battery flash in green. Connect the device to your PC/ Laptop and install the If the AutoRun option is available, run it and install the software. Once you have installed the default drivers, run the huawei-hilink-driver drivers and also them. Now open the web user interface in browser (if you do not automatically open 192.168.1.1/html/home.html) Go to Settings (if required for ID/Pass, enter admin in both), then go to the device settings and make a note of the IMEI and Serial number. This information to restore them later, as I said that in the process they will be wrong. Step 2: Now turn off the device, long pressing the Center button, and remove the back cover. Leave the battery inside and remove the screws 6 and open the front of the device. Step 3: Now we have to start the device. For this you will need a wire or any metal that can be used to tap the Ground connection to the edge, as shown in the diagram below. Keep both touched with one hand, and with the other connect the device to the PC/ Laptop with USB. You should hear a Sound and you'll see someone is installing. Step 4: Now open Balong USB Downloader 1.0.1.10 and E5573cs-323 usbloader extract, both in a folder. Run Balong and clik on the Detect button, it will automatically detect the COM Port and then clikc on points 3 near the load button $\hat{a} > USBLoader$ file that we extracted and click on the load. The Progress bar below will be loaded. Let it complete until the end, not interrupt or disconnect the cable even if it stops. Once again you will bear a sound and the router will restart and you will bear a sound and the router will restart and you will see once again installing the Firmware in the Router. Step 5: Now close Balong, and open the device toand then open any of the E573C-322TCPU-21.318.09.00 Universal firmware again. You will download the new firmware again and update it. Passage 7: now FirWare is installed, you need to install Web UI. Open the E553C-322TCPU-21.318.09.00 Universal firmware again. You will download the new firmware again and update it. Passage 7: now FirWare is installed, you need to install Web UI. Open the E553CC-322TCPU-21.318.09.00 Universal firmware again. You will download the new firmware again and update it. Passage 7: now FirWare is installed, you need to install Web UI. Open the E5573CC-32CCPU-21.318.09.00 Universal firmware again. You will download the new firmware again and update it. Passage 7: now FirWare is installed, you need to install Web UI. Open the E5573CC-32CCPU-21.318.09.00 Universal firmware again. You will download the new firmware again and update it. Passage 7: now FirWare is installed, you need to install Web UI. Open the E5573CC-32CCPU-21.318.09.00 Universal firmware again. You will download the new firmware again and update it. Passage 7: now FirWare is installed, you need to install Web UI. Open the E5573CC-32CCPU-21.318.09.00 Universal firmware again. You will download the new firmware ag WEBUI-17.100.15.00.03 Universal firmware. zip the E5573C web page 17.1100.15.01.03 general. zip (which never works, if you do not try the other) and run the exe inside. Once again detect the device will reboot and in a while your blouser will automatically open with the connection 192.168.8.1/html/home. html? Make sure to add all concernent of the device will reboot and in a while your blouser will automatically open with the connection 192.168.8.1/html/home. html? your Internet and APN profiles here as this is the Huawei Web and will allow you to add any APN profiles at any time. To add APN profiles Go to Settings "> Prifle management and add the APN and then click Load APN for which the profile of the network provider you want. CONGRATULATIONS!!! Your device is now unlocked... it is, however, now that you have deleted the NVRAM, your IMEI number and serial number is deleted and such a device is now unlocked... it is, however, now that you have deleted the NVRAM, your IMEI number and serial number and serial number is deleted and such a device is illegal from ut to be used in any country. If you try to access the Internet with a device without IMEI, your operator could disconnect the connection immediately. So now we need to restore the IMEI number and the serial number and the serial number and the number and the number and the number and the serial number and the number and th search. You may get an error below.
